Empowering Your Future: Analysis and Development of Software Program

Introduction

Welcome to my brochure on the Analysis and Development of Software program. I am excited to share the key aspects and my personal motivations for choosing this program.

- **Name:** Jimmy A. Ordonez B.
- **Email:** jimmy_ordonez@soy.sena.edu.co
- **Phone:** 3223227556

My expectations

- Learn to program my own leather goods store, Namua Leather Arts.
- Gain skills to excel in the field of cybersecurity.

Section 2: Analysis and Development of Software

Description

The technological training program in Analysis and Development of Software focuses on developing skills in creating software applications according to functional and technical requirements. It emphasizes individual and teamwork, ethical, professional, and personal values, benefiting society and national competitiveness.

Justification

The rapid influx of new technologies has increased internal demand for new products and services. The ICT industry in less developed countries must locate national offerings within the global and local market tensions.

Section 3: Market Demand and Curriculum

Market Demand

Colombian companies demand more technology professionals than available. The deficit will reach nearly 70,000 by the end of 2019.

Core Modules

- 220501092: Establish software solution requirements.
- 220501093: Evaluate software solution requirements.
- 220501094: Structure technical service proposals.
- 220501095: Design software solutions.
- 220501096: Develop software solutions.
- 220501097: Implement software solutions.
- 220501098: Control software service quality.

Justification (Continued)

Identifying priority technological focuses nationally and internationally is crucial to establish the target market. The talent trained in IT areas in Colombia is vital for addressing short, medium, and long-term industry challenges.

Admission Profile

- Academic: Completed Grade 11.
- Pass the aptitude, motivation, interest, and minimum competency tests.

Graduation Profile

- Technicians in Information Technologies.
- Computer Application Coders.

Methodological Strategy

•The methodology centers on building autonomy to ensure quality training within the framework of competency-based training, project-based learning, and active teaching techniques.
•It stimulates problem-solving through the use of information and communication technologies, integrating open and multi-technological environments that recreate the productive context.
•It encourages continuous self-criticism and reflection on the learning outcomes achieved.

Conclusion

The Analysis and Development of Software program not only meets industry demands but also aligns with my personal goals of establishing an online business and securing a future in cybersecurity.
